Air Pollution

This chest shows a lung disease called emphysema in the patient's left lung. Usually appears as a fine yellow dust. Industrial plants that produce metals such as and , refine petroleum, produce cement, synthesize , or make other chemicals are among those that can produce harmful air pollution.

Air Pollution Causes, Effects & Solutions: The Definitive Resource

Water, high in the atmosphere, combines with these chemicals and becomes acidic in nature. We know that air pollution in common with can seriously affect the growth of plants.

How Environmental Engineers Help with Air Pollution

Pollutant concentrations are converted into an Air Quality Index AQI with a lower AQI translating into cleaner air. Photo: Air pollution is obvious when it pours from a smokestack chimney , but it's not always so easy to spot. During the Middle Ages the burning of for fuel caused recurrent air pollution problems in London and other large European cities.

Automobile emissions control

But medical research has now connected it to a huge range of other health problems, including heart disease, strokes, high blood pressure, diabetes, dementia, fertility problems, various cancers, cataracts, and all sorts of birth-related problems including miscarriages and low-birth weight.

Automobile emissions control

It's particularly important to avoid car use when smog is bad in your city. Nitrogen oxides NOx -- Generated when nitrogen in the air reacts with oxygen at the high temperature and pressure inside the engine. Forest fires, erupting volcanoes, and gases released from of rocks inside Earth are just three examples of natural air pollution that can have hugely disruptive effects on people and the planet.
