shark

They use this trick to attract mates and confuse their prey. Sharks lose teeth regularly and can go through 30,000 teeth in their lifetime. The biggest threat to sharks is humans.

TOP 10 BIGGEST SHARKS IN THE WORLD

Though there are exceptions, sharks typically have a tough skin that is dull gray in colour and is roughened by toothlike. Sharks, together with and , make up the subclass Elasmobranchii of the Chondrichthyes. Their extensive movements are related to reproductive or feeding activities or to seasonal environmental changes.

TOP 10 BIGGEST SHARKS IN THE WORLD

The first tiger shark pup to hatch will eat its siblings.

shark

Blue sharks are highly coveted for their fins used in shark fin soup. There are more than 400 living species of sharks, taxonomically grouped into 14—30 families, according to different authorities. Bottom-feeding species of sharks are stout, blunt-headed forms that tend to have more-sluggish habits.
