Primate

In some populations, large groups are better able to defend higher quality home ranges than smaller groups. Diet and feeding A holds a cut piece of fruit in its hands and eats Primates exploit a variety of food sources.

Primate

Primates are found in all continents around the world, with non-human primates mostly occurring in Africa, Central and South America and southern Asia. Most primates have thumbs that can bend to meet the other fingers. As far as is known, no other has them.

Primates

For instance, primate brains are large compared to the size of their bodies. Mammals of Madagascar, A Complete Guide.

Primate

Within haplorhines, platyrrhines and catarrhines show different grade shifts in the relationship between body mass and brain mass. Our primary goal was to develop a species-specific camera trap placement method to detect dryas monkeys. A above the eye sockets reinforces weaker bones in the face, which are put under strain during chewing
