## Jāmi'at Wahrān [WorldCat Identities]

The second focuses on explaining the causes of degradation through the study of littoralization and its various mutations at the regional and local level. The first deals with environmental issues by three entries: the disruption of coastal dynamics, the loss of biodiversity and degradation of the natural landscape. On améliore également la condition de Esterle-Mokhtari concernant la norme de condition qui permet de conclure qu'un semi-groupe admet une limite en norme à l'origine, quand est un entier.

## Jāmi'at Wahrān [WorldCat Identities]

It analyzes the different modes of occupation of the coastal area, and addresses the interactions between different components of the landscape at the ecological, economic and social level. On donne enfin des formules explicites permettant de construire une suite exhaustive d'idempotents dans l'algèbre de Banach engendrée par un semi-groupe fortement continu ne vérifiant pas la minoration au voisinage de l'origine. It focuses on the man - environment relationship by combining the knowledge of physical geography to human geography.

## Jāmi'at Wahrān [WorldCat Identities]

The diachronic, deals with evolution over time, of the interactions between coastal occupation and natural landscape. The thesis is structured in three parts, and includes analysis based on case studies.
