## Oxfordshire

Time horizon: 1980 to 2040 Update frequency: Quarterly Cities and regions data The only global service of its kind, this comprehensive set of data and forecasting services covers over 3,000 cities and sub-regions. Annual forecasts of air passenger flows for almost 4,000 routes and 185 major markets over the next 20 years, representing over 90% of all air travel in that time period. The current set of projections also incorporate modifications to the original projections in light of subsequent analysis and projections of the age cohorts.

## Population

Conversely, the area of, now administratively in , was historically part of Oxfordshire as was the parish of, now administratively in.

## Population & Household Projections

Households with two or more adults headed by those aged 70 years and over increase under the projected household representative rate variant The household representative rate HRR is the proportion of people in a particular demographic group based on geography, age group and sex who were the household reference person. While short-term population data will often exhibit some variety of sawtooth pattern when charted, long-term population data usually follow a log-linear trend. Available for the UK and its constituent countries as national population projections and for the regions, local authorities and clinical commissioning groups in England as subnational population projections.
