Importance of soil calcium for composition of understory vegetation in boreal forests of Finnish Lapland

Numbers refer to the study sites given in Table. They are intimately combined through processes such as biogeochemical nutrient cycling, symbiosis and pathogenicity, etc .,

Topographic controls on the variability of soil respiration in a humid subtropical forest

Eck KC 1984 Forest characteristics and associated deer habitat values, Prince William Sound islands. Citation: Kristensen T, Næsset E, Ohlson M, Bolstad PV, Kolka R 2015 Mapping Above- and Below-Ground Carbon Pools in Boreal Forests: The Case for Airborne Lidar.

Soil enzyme activity and stoichiometry in forest ecosystems along the North

Spiders and carabids might be less sensitive to treatment effects due to their higher mobility as compare to other studied organisms. A new topographic index to quantify downslope controls on local drainage.

A Compilation of Global Soil Microbial Biomass Carbon, Nitrogen, and Phosphorus Data ,

The role of spatial scale and the perception of large-scale species-richness patterns.
