## Datura

Abiotic stresses and endophyte effects. Subacute may respond to activated charcoal and excavation of stomach if performed immediately.

### Anaphylactic reaction to chamomile tea.

What's Blooming Now - Check the.

### A case of bullous eruption caused by May-weed.

It can be difficult to determine whether you are dealing with poisoning or some type of infectious disease. Common names may differ from one locality to another and an attempt has been made to follow local usage.

## Details

In acute cases, animal may gasp and die within one to three hours of eating. Other losses result from tunneling and mound-building activities: soil and rocks from mounds damage harvesting machinery and degrade quality of crops.
