Green Dragon Football Squares: Why are the Rainforests Disappearing?

Vast areas of rainforest are cut in one go clear felling and the most valuable trees are selected for timber, leaving the others for wood chipping.

The Rainforests

In fact, the extinction of some animals is probably Chainsaws, bulldozers, and suppliers are used to clear the rainforest for its timber value and the land is used for farming and ranching operations. A study by researchers at the University of Maryland last year showed that the three main drivers of palm oil expansion are geographical suitability, proximity to a market or a port, and the infrastructure to get the trees out.

9 Rainforest Facts Everyone Should Know

A new school of thought is appreciating the ecological principles and benefits that diversity of natural biota have for humans and the environment. Now the spotlight is on Brazil and the Amazon. Photo credit: Jessica Webb Rainforests add water to the atmosphere through the process of transpiration, by which plants release water from their leaves during photosynthesis.

The Rainforests

Growing the same crop over and over again uses the same nutrients and we get soil depletion.
