Mining

In Proceedings of the CIM Annual Conference, April 28-May 1, Vancouver, B.

**Resource management at Highland Valley Copper**

Decision on timing of these modifying events was often dictated by review of deformation magnitudes and rates determined from continuous slope monitoring records. Aerial imagery and LiDAR served as base maps for engineering geomorphology mapping and allowed us to document landslide blocks and a relative chronology of events for each mass movement. Three separate analyses approaches have been applied to the assessment of potential subsidence for a proposed block caving mine in eastern Canada.

Rock Mechanics and Slope Design Investigations for the South Pit of the Kennecott Ridgeway Mine, South Carolina. The predictions were forecasted five days to three months in advance of failure. This raises concerns about maintaining water quality in streams passing through or beneath the dumps and potential detrimental effects to dump stability.

Mining

To safeguard against destabilizing slope conditions, if they were to occur, empirical failure time prediction and runout assessment methods can be used to define slope monitoring thresholds and hazard zones.

The factor of safety of the wedges is also plotted.

## **Humboldt**

Pursue affordable housing consistent with the Housing Element to provide safe, affordable, and healthful living opportunities. In Proceedings of the 2nd CIM District 5 Meeting, September, Hinton, B. This integrated resource management approach will serve as the framework for Highland Valley Copper.

## **Humboldt**

Two case studies which illustrate the application of this approach to open pit slope design are described. Build relationships, work collaboratively with the community, and implement procedures that make health a priority for the community.

## **Publications — Piteau Associates**

In Proceedings of the 2nd International Congress on Water Management in the Mining Industry pp. This paper provides an overview of the development of inverse-velocity as a tool for failure prediction and a detailed discussion of the advantages and limitations of the technique, illustrated by examples from the literature. At the bottom of the impoundment, As concentrations decrease sharply to 0.
