Meso Compounds

Mesotherapy is a promising treatment for removing unwanted fat and body contouring. So look for symmetry on both sides of the plane.

Meso Compounds

So I'll just pick one of these models, doesn't matter which one because they represent the same compound, and I'll rotate, I'll rotate it around so we can see a plane of symmetry. What it means here is that when we have an internal plane that splits the compound into two symmetrical sides, the stereochemistry of both left and right side should be opposite to each other, and therefore, result in optically inactive.

mesomorph

As mentioned above, a meso compound is optically inactive, so their stereochemistry should cancel out.

mesomorph

Although the Sheldon system of classification does not make absolute distinctions between types, a person is classed as a mesomorph if mesomorphy predominates over endomorphy and ectomorphy in his body build. This is considered to be an off-label use of the approved ingredients. Only have any evidence to show they work.

Meso Compounds

Here's our carbon chain with an OH coming out at us in space and an OH going away from us in space. So this is really just a maximum number, so I'm gonna put a question mark right here.

5.6: Meso Compounds

And when I do that, we can see that these are mirror images of each other. First let's see if they are mirror images of each other.

Meso Compounds

So that's an opposite configuration at that carbon. On the left is stereoisomer three. Mesotherapy is a technique that uses injections of vitamins, enzymes, hormones, and plant extracts to rejuvenate and tighten skin, as well as remove excess fat.

mesomorph

Many of the studies that have been done have looked at mesotherapy for pain — not for cosmetic treatment. It's a compound that has chirality centers, but it is achiral, the mirror image is superimposable.
