In addition, competitive pressures and quality requirements demand a more in-depth understanding of product behavior under real life loading conditions.

If you are interested in A vibration Analysis Equipment is an instrument used to measure, store and and diagnose the vibration produced by your machines. If a resonant frequency is excited by another frequency operating at or near the same speed, a rotating machine or component can destroy itself in a very short time. Use the function tsa to generate time-synchronized waveforms for both the pinion and the gear.

Logic: anti-friction bearings inherently have low starting friction but high running friction, and the shaft frequency for oil lubricated bearings should not exceed 9,600 divided by the shaft diameter. It is useful for during dynamic balancing, orbits and ODS Operating Deflection Shapes.
