National accounts statistics: analysis of main aggregates, 2018

Over the years, the SNA has been constantly updated by international organisations making recommendations and concepts suitable for new aspects of production, consumption and accumulation — characteristics of the changing economy. Third, in benign climates, clothing and heating are less costly, so comparing across countries or across regions within large states will distort the relative level of well-being. The first column covers the original 2014 data, the second column the new 2014 estimates, the third column shows the difference between these two, the fourth column shows the explanation from the latest update, and the fifth column shows any difference between the actual difference in 2014 sector figures and the claimed difference from the latest update.
