**An introduction to aspects of thermodynamics and kinetics relevant to materials science (Book, 2007) [ne-x.uni.rf.gd]**

Because, in the absence of any magnetic

spin order, such as is the case at very high temperature above the Curie temperature, the bcc bcc structure has a higher entropy than the fcc structure, as already noted, it will eventually become more stable than the fcc structure. The result for the order parameter within one sheet of tetrahedrons versus temperature is shown in Figure 1. و سینیٹیک برای حل مشکلات در علم مواد
