## Types of Chemical Reactions (With Examples)

The different types of reactions and the way electrons are exchanged or shared can produce such different products as plastics, medicines and detergents.

## Chemical Reactions: Arrangements of Atoms Science Games

National Research Council; Division of Behavioral and Social Sciences and

Education; Board on Science Education; Committee on a Conceptual Framework for New K-12 Science Education Standards. Often a given reaction can be placed in two or even three categories, including -forming and precipitation reactions. Depending on the atom's atomic number, that can mean having two, eight or more electrons in the outside shell.

## 2.1G: Chemical Reactions and Molecules

The optional further experiments offer students more opportunities to interact with this practice, especially when looking for evidence of reaction such as color change.

## What Happens to Atoms During a Chemical Reaction?

This is an example of a balanced chemical equation, wherein the number of atoms of each element is the same on each side of the equation.
