## Trepostira depressa

Recent work by HECKEL, and his re-interpretation of cyclothem deposition in the midcontinental United States, suggests that the middle limestone member Leavenworth is the transgressive carbonate in a cyclothem overlain by fissile black shale now regarded as an offshore core shale that was deposited within the deepest waters of the cyclothem.

## Fossils from the Hughes Creek Member, Foraker Formation

Obwohl der Leavenworth-Kalk in diesen klastischen Folgen an sich nicht erkennbar ist, reicht er offenbar weiter nach Süden als alle anderen oberkarbonischen Kalke. This finding suggests that early molluscs had only a single shell.

## gastropod

This genus may be rather long-ranging, the earliest species appearing in the Mississippian of the mid-continent. Vineyard University of Missouri Press Columbia and London Pennsylvanian Brachiopods of Ohio Bulletin 63 By: Myron T.

## Fossilworks: Ananias nodocostatus
