Labor Rate for Construction

Case 1 The state operates a weigh station for trucks traveling on the highway. Additionally, there are other complicating factors such as uncertainty in the demand for the products, random machine breakdowns, and union agreements that restrict how the labor force can be used. Some agencies have placed a performance requirement in the PWS for the incumbent contractor to maintain accurate workload data.

Expectations and Requirements Operations and Maintenance Alignment

Individuals from different groups may not have a common loyalty and may prefer to expand their energy in the directions most advantageous to themselves instead of the project team.

Principles and Applications of Operations Research

Doing the work is not the only option. Those responsible for maintenance can gather data rapidly from connected machines via diverse sources, such as critical equipment sensors, industrial control systems, enterprise resource planning ERP systems, computerized maintenance management systems CMMS, and production systems, enabling them to identify root causes that may have gone unnoticed before. Under the Navy aircraft maintenance contract, requirements are stated in measurable terms such as: ground abort rate is less than five percent; 100 percent of flight schedules are met; and aircraft are 80 percent mission capable.

Maintenance Strategy Optimization

Once established, the team should designate a team leader to serve as a facilitator.
