## Halderman & Linder, Automotive Fuel and Emissions Control Systems

About four-fifths of the material in a car is recyclable, and in the United States 19 out of 20 scrapped cars are recycled. The emission control system wears and tears over the years and needs repairs. The outside temperature must not be too cold less than 0 degrees F or too hot over 90 degrees F.

## Halderman, Automotive Fuel and Emissions Control Systems, 4th Edition

In this matter, the emergence of electronic control systems has brought a revolution on every level, and both Tier 1 and Tier 2 manufacturers compete with each other to offer end users the most innovative electronic fuel injection systems. What fuel injection systems can we find on the market? This is done when the converter becomes hot unitizing a thermo reaction due to the catalyst material inside the unit. Being that EGR gases are almost completely depleted of all oxygen content, the engine is denied the oxygen atoms required to facilitate the development of NOx.
