## Publications

Love, Alexander Rudnick, Sergey Bagnich, Fabian Panzer, Anna Stradomska, Guillermo C. The weakening of the Pb—I bond following the hole trapping oxidation of the iodide site and its expulsion from the lattice in the form of iodine provided further insight into the photoinduced segregation of halide ions in mixed halide perovskite films.

## Publications

By employing CsPbBr<sub>3</sub> films deposited on a mesoscopic TiO<sub>2</sub> film, we have succeeded in probing the influence of electrochemical bias on the charge carrier recombination process. RHE potentials of these metal nanoclusters make them suitable for driving the water splitting reaction.

## Publications

Gene and drug background summaries are provided in addition to evidence from a focused literature review supporting the provided prescribing or dosing recommendations.

## All Publications

The reaction was found to be strongly dependent upon temperature, featuring an Arrhenius relationship. In particular, reduced graphene oxide is a suitable composite substrate because of its two-dimensional structure, outstanding surface area, and electrical conductivity.

## Publications

Taking all these results together as a whole, we propose a set of boundary conditions and protocols for how electrochemical experiments with lead halide perovskites should be carried out and interpreted. Poor solubility of CsBr in organic solvents makes typical solution deposition methods

difficult to adapt for constructing CsPbBr<sub>3</sub> devices. A reduced graphene oxide—Ag nanoparticle RGO-Ag NP composite has been designed to boost SERRS sensitivity of a porphyrin derivative.

#### **Kajian teknologi High Altitude Platform (HAP) [Study of High Altitude Platform (HAP) technology]**

Prolonged exposure of a TiO<sub>2</sub> film to a CdSe QD suspension resulted in the assembly of aggregated particles regardless of the method of adsorption. By employing potentiostatically controlled electrodeposition technique, it is possible to obtain controlled thicknesses of HTM layers. Project Google Loon - Kominfo.

All guideline manuscripts, supplements, and additional supporting documents are available for download from the website.

#### **All Publications**

With increased interest in semiconductor nanoparticles for use in quantum dot solar cells there comes a need to understand the long-term photostability of such materials. The possible reaction mechanisms of radical adduct formation RAF, hydrogen atom transfer HAT, and single electron transfer SET were considered. Namun, belum ada peraturan yang mengatur alokasi frekuensi untuk HAP secara khusus di Indonesia.
