According to this mechanism, certain radio frequencies are included in the so-called a priori plans and thereby reserved for the use by specific states Radio Regulations, , No.

ITSO

Therefore, several states can be considered launching states and held liable for the same case of damage.

ITSO

Finally, the Liability Convention addresses international liability only, that is liability involving one or more states on both sides. A policy analysis of Korean smart grid project. VII state, almost verbatim, that each launching state is internationally liable for damage to another state or to its natural or juridical persons caused by its space object or its component parts on the Earth, in air space, or in outer space.

Such requirements fully apply to operators, which have to obtain all the necessary licenses and authorizations, as well as comply with all other statutory requirements in order to carry out satellite telecommunications. On the one hand, satellite telecommunications are space activities and therefore regulated by international space law, which is mainly developed within the framework of the UN Committee on the Peaceful Uses of Outer Space COPUOS. Therefore, the international legal regime of satellite telecommunications analyzed in this article includes provisions of international space law and the ITU regime; however, other branches of international law, including the regime of the World Trade Organization, as

well as national legislations particularly export control rules , can also be relevant to satellite telecommunications making the applicable legal regime complete.
