Living embryos : an introduction to the study of animal development (eBook, 1967) [ne-x.uni.rf.gd]

This takes place about 36 hours after fertilization.

Fertilization and Development

Cleavage is complete, or holoblastic, in many invertebrates including coelenterates, annelids, echinoderms, tunicates, and cephalochordates. In fish they develop into gills, but in humans they disappear before birth.

Cloning

Original photos for each drawing are supplied in the supporting files.

Embryo

Explain how the embryo forms from the zygote After an egg is fertilized, and has fused with sperm to form a zygote, an embryo begins to develop.
