The Evolution of Artiodactyls

Zagami is one of the most studied of all martian meteorites. Three-quarter view of the skull and jaws from the left side, in the position in which it stands on the mounted skeleton, approximately one-sixth natural size. The specimen in the Mini Museum comes from the lower jaw of an Archaeotherium, a cow-sized species of Entelodont which dominated the plains of North America for six million years.

Brachyhyops

P3 is a very large tooth, imperfect at tip and posterointernally, and lacks a heel, so far as can be judged in its present worn condition. The specimen in the Mini Museum comes from a range of ceramics associated with three of these ancient societies: Ancestral Puebloans also known as Anasazi, the Mogollon, and the Hohokam. BIG BADLANDS OF SOUTH DAKOTA.

Volume 15 Issue 4

Further discussion of the affinities of entelodonts in general and the forms from the Protoceras beds in particular may be postponed until the collection of the American Museum of Natural History has been studied. Bulletin of the American Museum of Natural History 85: 1—350.

The oldest representative of Entelodontoidea (Artiodactyla, Suiformes) from the Middle Eocene of Khaichin Ula II, Mongolia, and some evolutionary features of this superfamily

The origin of the group as a whole is uncertain. Sometimes if one knows them and is on the lookout they can be seen shining forth out of the earth.

ブラキヒオプス

Notice of a new genus and species of Artiodactyl from the Upper Eocene of Wyoming. .

The Evolution of the Artiodactyls

The taxonomy of three Recent *Spinileberis* species S.
