In which allow direct cell-cell interactions the same cells differentiate into epidermis.

Brain Development During Adolescence

The biggest changes in the folds of the brain during this time occur in the parts of the cortex that process cognitive and emotional information. Contemporary diffusion-weighted techniques may also uncover the macroscopic process of axonal development. This advisory is intended to raise awareness of the known and potential harms to developing brains, posed by the increasing availability of highly potent marijuana in multiple, concentrated forms.

The Effects of Marijuana on the Developing Brain

Biological Psychiatry, 79 7 , 613-619.
