Hearing Conservation The audiologist designs, implements, and coordinates industrial and community hearing conservation programs.

Scope of Practice

The central focus of the profession of audiology is concerned with all auditory impairments and their relationship to disorders of communication. Keith in 1992 and revised again in 1996 and 2004. This document outlines those activities that are within the expertise of members of the profession.

Audiology

Anatomy of the Inner Ear This session describes the anatomy of the inner ear, excluding the balance system. The audiologist administers audiologic identification, assessment, diagnosis, and treatment programs to children of all ages with hearing impairment from birth and preschool through school age.

AudiologyOnline Journal

The audiologist is an integral part of the team within the school system that manages students with hearing impairments and students with central auditory processing disorders. Periodic updating of any scope of practice statement is necessary as technologies and perspectives change.

Scope of Practice

Audiologists teach physicians, medical students, residents, and fellows about the auditory and vestibular system. Areas of practice include the audiologic identification, assessment, diagnosis, and treatment of individuals with impairment of auditory and vestibular function, prevention of hearing loss, and research in normal and disordered auditory and vestibular function. This document will be reviewed, revised, and updated periodically in order to reflect changing clinical demands of audiologists and in order to keep pace with the changing scope of practice reflected by these changes and innovations in this specialty.
