Outside of macroeconomic theory, these topics are also extremely important to all economic agents including workers, consumers, and producers. The business cycle is comprised of the upward and downward movement in the level of Gross Domestic Product GDP over time. That would explain why firms typically want to invest only in projects that have a high expected profit.

The aggregate demand curve is downward sloping but in variation with microeconomics, this is as a result of three distinct effects: the wealth effect, the interest rate effect and the exchange-rate effect.

Solved: Question 1 Assume Aggregate Revenues Of The Worker...

At low levels of debt people will consume more and save less. The main cause of a shift in the aggregate supply curve is a change in business costs — for example: 1. The difference between an under developed and a developed country is this — a developed country consumes less capital but brings out more output, while an consumes more capital and turns out lesser output due to poor technology.
