Hail

Hail is water that gets caught in strong upward moving winds. While most hail is small, some hailstones can be as big as softballs. .

Hail

Each time it goes up, a layer of ice is formed. This can get sent back up into the freezing air several times.

Hail

Once the hail is too heavy or the strong upward winds weaken, the hail will fall to the ground.

Hail

The water will freeze, then start to fall, with more water attaching to the hailstone. . .

Hail
