## WorthPoint

Part I is a literature study of the available calorimeter equipment. Now the only role I was supposed to take was to work with them and just help them find whatever supplies and so on they might need and sort of act as an interface, or liaison for them.

## Transistor History

We conclude by arguing that the lack of private incentives, due in part to a splintering of technology trajectories and short-term private profitability of many of these new splinters, creates a case for greatly increased public funding and the need for leadership beyond traditional stakeholders. Subsequently I came across the patent that was written on the IBM 360 computer and it runs something like, I think it's around 900 pages of drawings and another 900 columns of text, or something in that order.

## WorthPoint

TH: Yeah, until it's in a customer's hands. .

## Tutorial review: audio amplifiers in mobile platforms

RW: You know, if it's a RAM, it's pretty obvious what it does but something like this, it's not clear what it would be used for initially.

## Isothermal reaction calorimeters—I. A literature review

. Another group of nanotechnological techniques include those used for fabrication of and , those used in semiconductor fabrication such as deep ultraviolet lithography, electron beam lithography, focused ion beam machining, nanoimprint lithography, atomic layer deposition, and molecular vapor deposition, and further including molecular self-assembly techniques such as those employing di-block copolymers.
