Sensitivity analysis Although we believe that our changes to the model are a better reflection of the current HIV situation in the Netherlands, for ease of comparison, we performed a sensitivity analysis in which we reversed the five previously described model adaptations back to the 2007 set-up.

HIV Transmission Patterns Among The Netherlands, Suriname, and The Netherlands Antilles: A Molecular Epidemiological Study

This corresponds to 8,318 95% CrI 4,406—15,260 undiagnosed individuals, a decrease of 202 individuals compared to 2007. Other barriers have to do with deficits in methodological skills like research design and statistical interpretation or language composition of articles or fluency in English. He recalled one evening sitting with Lange at a hotel bar in Thailand, as Lange conversed easily with a Dutch princess.

The emergence and evolution of the research fronts in HIV/AIDS research

Representation of authors and editors from countries with different human development indexes in the leading literature on tropical medicine: survey of current evidence.

Changing Patterns of Undiagnosed HIV Infection in the Netherlands: Who Benefits Most from Intensified HIV Test and Treat Policies?

Prospective cohort studies initiated since early 1997 indicate that healthy, HIV negative Ethiopians have lower CD4+ T-cell counts compared to the Dutch population and in addition they have chronically activated immune systems, possibly as a result of the highly prevalent intestinal parasitic

infections as well as other infections.

India, Netherlands, Sweden collaborate for HIV / AIDS research, Health News, ET HealthWorld

Int J Technol Assess Health Care.

Resultaten van het 'Ethiopia

Figure presents a flow chart showing the selection process for the sample of documents analyzed in the study. All relevant information concerning the Dutch response can be found. In the early 1960s, Philips Research moved to its current site in Waalre, where it expanded into IC technology, software, and systems.
