The AIDS Epidemic and Sociological Enquiry

This epidemic is not ordinary in one quite specific way: it can be determined many years in advance of the onset of actual illness in a patient that the illness will come. Committee on AIDS Research and the Behavioral, Social, and Statistical Sciences, Commission on Behavioral and Social Sciences and Education, National Research Council. French biomedicine also places a great deal of emphasis on the liver as a key locus of disease, including complications such as migraine headaches, general fatigue, and painful menstruation.

AIDS as social construction: text mining of AIDS

Thus, what we take to be true and objective is the result of social processes that take place in historical and cultural contexts. Questions about appropriate legal definitions of familial relationships will continue to be raised at least as long as the epidemic continues. His corrective for this shortcoming is a call for the making social of disease, allowing it to emerge in the thinking of health social scientists and health care providers alike as a social product that reflects and reproduces patterns of social inequality.

The social construction of AIDS during a time of evolving access to antiretroviral therapy in rural Malawi

The first study examined issues of parental authority and foster parenting in Miami and New York. This paper draws upon a set of conversational journals collected over the past decade in rural Malawi, to understand how perceptions of AIDS are constructed as talk of antiretroviral therapy ART filters through social networks. Other potential mechanisms of disease spread are unique to prison culture and difficult to evaluate.

Fox 1988 AIDS: The Burdens of History.

Guidance for NGO social contracting mechanisms

That review process by scientific peers is time consuming, and the combination of review time and queuing for a place in the journals may result in long lag times between submission of a manuscript and publication. Their work shaped governmental, state, and community responses to the epidemic, including in such agencies as the National Institutes for Health and the Centers for Disease Control and Prevention CDC. This pattern has created tension between the social and geographical localization of the epidemic and the need to mobilize resources to deal with the epidemic from among individuals, groups, and institutions that are removed from the social groups that are at the epicenter of the epidemic.
