## Veterinary Anesthesia Support and Service

A catheter must be placed directly into an artery and attached to a transducer via saline-filled tubing.

## Veterinary Anesthesia Equipment

It appears to be no longer available. Just wanted to say what a meticulous and thorough job both technicians did with our machines this year. A range of analgesic therapies should be available and utilised including full opioid agonists, local anaesthetics, NSAIDs, adjunctive drug therapies and non-drug therapies.

## Association of Veterinary Anaesthetists

The capnograph is the waveform that shows how much CO<sub>2</sub> is present at each phase of the respiratory cycle, and it normally has a rectangular shape Figure 1.

## Anesthesia, SurgiVet, Smiths Medical, Anesthesia Accessories, Anesthesia Equipment

Fluid therapy considered for every anaesthetic and goal directed administration provided where indicated. Many veterinary team members wet the tongue in order to help improve pulse oximetry readings, but there is no evidence that this is effective and no reason that it should improve values.

## Anesthesia

Loss of the corneal reflex indicates that the patient is too deep and in danger. Please advise them of any known allergies to medications, serious illnesses, or complications with previous anesthesia.

## Veterinary Continuing Education

In anesthetized patients, ECG monitoring can allow the detection of drug-induced arrhythmias, as well as arrhythmias that may be caused by electrolyte abnormalities. The capnograph is one of the most important machines that veterinary technicians need to be able to monitor and

understand. Your vet should design an anaesthetic protocol tailored to what your pet needs.

### **Veterinary Anesthesia Services & Equipment**

Although sedation does carry similar risks as those for general anesthesia, it typically has less impact on the respiratory and cardiovascular system and allows for faster recovery. Q: How do you fix hypothermia? Monitoring was rare, with pulse monitored in 38%, pulse oximetry in 16%, and both pulse and pulse oximetry in 25% of cats.

### **Veterinary Anesthesia**

Discussion: The AVA believes that veterinary anaesthesia is a complicated enough subject that its management should only be entrusted to staff that have received a rounded veterinary education and have documented this through industry respected qualifications.
