PCR Lab Report

Each of these assays has been shown to be highly specific and sensitive for their respective serotypes. Gel electrophoresis is a technique in which fragments of DNA are pulled through a gel matrix by an electric current, and it separates DNA fragments according to size.

Meningitis Lab Manual: PCR Detection and Characterization

Molecular analysis of the biosynthesis pathway of the alpha-2,8 polysialic acid capsule by *Neisseria meningitidis* serogroup B. However, false-positive results with ply-based PCR have been reported when applied to upper respiratory tract specimens. The C_t is inversely proportional to the log of the initial copy number.

PCR Primer Design

For optimal yields of S.

PCR Lab Report

The non-template controls ntc for both the clean and dirty rooms are done in duplicate for each assay type more can be added if the user deems it necessary.
