## Vulnerable Populations In The Long Term Care Continuum Advances In Long Term Care PDF Book

As seen in the Table, the chronically ill are twice as likely as those in the general population to report poor health days. Focus groups and case studies are among the approaches that may be more helpful than quantitative approaches under certain circumstances because they may be more sensitive to certain types of quality problems than other methods. The combination of general and targeted strategies is most likely to identify efficiently and effectively the highest priority quality problems for vulnerable populations.
