Visual perception

A separate GLM using 10 finite impulse response FIR functions was also conducted within each ROI to generate timecourses of activity for each condition.

Eye Movements Help Link Different Views in Scene

The sensory speech area of Wernicke lies in the posterior part of the superior and middle temporal gyri. It thus appears that our task was simply not effective at generating RSC responses in general.

Human Cortical Areas Activated in Relation to Vergence Eye Movements—A PET Study

Annual Review of Neuroscience, 22 1 , 241-259.

Visual area V5

It includes the olfactory bulb, tract, and trigone, the anterior portion of the gyrus cinguli, and the uncus.
