System problems of economic growth in modern Russia

Moscow City University of Psychology and Pedagogy, Moscow, Russian Federation Importance A correlation and regression analysis is a conventional and traditional method to model dynamic relation of economic parameters. Hence I model autoregressive models and distributed lag models, with the issue of choosing the lag length no longer existing. Application The proposed methods are rather effective and may be used to model economic processes, and economic indicators of industries and companies, in particular: for example, the dependence of profit on production investment, advertising expenses or market research.

Оптимизационные и балансовые модели народного хозяйства

Moscow, Al'pina Biznes Buks Publ. Soderzhit kratkuju teoreticheskiju informatsiju, metodicheskie ukazaniya i instruktsii, zadaniya i kejsy dlja samostojatelnoj i nauchno-issledovatel'skoj raboty kak po klassicheskim, tak i po perspektivnym razdelam ekonomiko-matematicheskogo i matematiko-statisticheskogo modelirovaniya optimizatsionnye i balansovye modeli, modeli odnovremennogo planirovaniya, ekonometricheskie i evoljucionno-simuljativnye modeli. Special attention is given to the peculiarities of cluster development process that determine the initial conditions for finding an optimal placement and long-term growth of industrial production in the cluster.

Modeli dinamicheskogo balansa narodnogo khozyaistva (1988 edition)

The article deals with the prospects of developing significant world reserves of high-viscosity oil. Moscow, Finansy i statistika Publ.

Prospects for production of viscous fluid by electric shaft

Additional reasons for decreasing the characteristics of the pump on the viscous fluid, results of the test of stage assembly with measurement of average circumferential components of flow rates at different viscosity of the pumped fluid are given.

Optimizatsionnye i balansovye modeli narodnogo khozyaistva : [Sbornik statej]

The article applies the modern approaches towards economic-mathematical modelling, as well as systematization of geostatistical methods. It allows one to simulate the effect of control actions on the performance of structural and functional units of the region in accordance with the purpose of control and thus improve the functioning of the region. Moscow, Al'pina Biznes Buks Publ.

Prospects for production of viscous fluid by electric shaft

Full-Scale Investigation of Gas-Handling Capabilities of High-Flow Helicoaxial ESP Stages for Deepwater Application. The reasons for unstable operation of the ESP at start-up after long stops are described.

System problems of economic growth in modern Russia

Petersburg, Tipografiya tovarishchestva Narodnaya Pol'za Publ. Institute of Economics, Management and Law, Kazan, Republic of Tatarstan, Russian Federation Importance The article deals with the theoretical and methodological aspects of modeling of region governing processes based on the analysis of the relationship between the parameters that play a significant role in the organization of regional management. Keywords: industrial policy, regional development, criterion of optimality, geostatistics, economic and mathematical modeling, spatial development, Clusters, localization of production, economic space, transport task This article written in Russian.
