Backgrounds -- 03Towards a European Research Area

Notes: Includes bibliographical references (p. 96-99).

This edition was published in 2007

Filesize: 28.910 MB

Clivia Sotomayor Torres PHENOMEN and Cecilia Laschi OCTOPUS shared their perspectives on the involvement of women in the Pathfinder projects, addressing areas capable to create new foundations of science-enabled innovations.

Towards a European health research and innovation cloud (HRIC)

AI, green technologies, health, smart mobility.

Regions and cities as a driving force towards a renewed European Research Area (Part II)

The session invited participants to share and confront their views on how, where, and when to do that. Cloud computing for genomic data analysis and collaboration. Like the EJP-RD, the European Strategy Forum on Research Infrastructures ESFRI can play a role in the development of the HRIC.

Regions and cities as a driving force towards a renewed European Research Area (Part I)

European research area (ERA)

It also aimed for the free circulation of researchers, scientific knowledge and technology throughout the EU and focused on stimulating cross-border cooperation and on improving and coordinating the research and innovation policies and programmes of the Member States. It covers short-term actions based on close coordination, cooperation, data sharing and shared funding efforts. Description

Our calculations from current data among the first to cover the EU27 and in many cases associated countries reveal high levels of ERA integration but little or no progress over the last decade or so- a pattern that is in broad agreement with relevant literature. How your national researchers cooperate with others? Revitalising ERA: timeline September 2020 The Commission publishes plan for relaunching ERA December 2019 - June 2020 to prepare for relaunching ERA. The session explored methods and products being developed for this purpose, notably in the context of InvestEU — the EU's proposed flagship investment programme to boost the European economy — and how the investment community is adapting to the sustainability challenge.

Towards a European health research and innovation cloud (HRIC)

Data providers need logging and monitoring functionalities to comply with the GDPR and to enable tracking of data and methods within the system, controlling instances and routines that check for the adherence to predefined standards and formats to guarantee data integrity. This stipulates that patient donors should be able to retain control over their data regardless of technological developments. The commission said the would prioritise investments and reforms in research and innovation, improve access to excellence for researchers across the EU and enable research results to reach the market and the real economy.

The European Research Area (ERA)

Its main purpose was not to maximise the return on investments, but to accompany the companies in their growth as patient capital investor. The event was powered by Dealflow. The strategy document on Widening served as a background document for discussion.

Regions and cities as a driving force towards a renewed European Research Area (Part I)

To do this, a joint effort must be made by the European Commission and National Agencies. But the vision also spells out that member states should set a target of 3% of GDP to be invested in EU research and innovation and for a target of 5% national public funding to joint research and development programmes and European partnerships by 2030. Organised by the European Research Council and The Kavli Prize.

European research area (ERA)

The results of these discussions will be taken into account for the finalization of the draft Strategic Plan document and the preparation of the first Horizon Europe Work programme. The European Knowledge Strategy connected ERA and EEA and mutually reinforced them to allow for coordinated education and research policies and investments.
