You will be asked to go to regular checkups. Special procedures may be necessary to improve the accuracy of the mammogram and to avoid damaging the implant. Because the blood supply to the tissue used for reconstruction is left intact, blood vessels do not need to be reconnected once the tissue is moved.

Thigh-based flaps do tend to have more healing problems at the donor site than abdominal-based flaps due to the location of the incision.

Breast Reconstruction After Mastectomy

The muscle is placed and sutured to the chest wall. Many women who have a mastectomy—surgery to remove an entire breast to treat or prevent breast cancer—have the option of having the shape of the removed breast rebuilt. Special notes regarding recovery Because the free TRAM, DIEP and SIEA flaps involve microsurgical tissue transfer, blood flow to the flap is closely monitored in a hospital setting after surgery.
