Organisation topologique de l'espace architectural : Topological organization of architectural spaces...

Besides Imamoğlu, a number of authors have found cues for space perception.

UMR AMAP

Is it possible to predict a student's score in their third year based on their first year performance on the test? Only at the later Lengyel villages such as Brzesc Kujawski does overlap occur, although even here the separate development of individual houses can sometimes be observed. .

IAPS 11

Algorithms for an Efficient Tensor Biclustering. They differ from societies with temporary dwellings or no dwellings and people who live in highly urban cultures and who work in factories and offices.

Representational Structures as Stances: Examining Relationships to the City Under the Lens of Socio

Round forms then become more frequent and the chambers increase in size.

Architecture and Order: Approaches to Social Space

Many researchers attribute the unique forms of these buildings to the influence of climate. Still, these studies show that relationships to urban space are functional and pragmatic for working-class individuals, and hedonistic and aesthetic for members of the more privileged social classes. The scales included two measures of knowledge structure goodness-of-example, and familiarity and two measures of aesthetic response preference, and interest.

Christophe Godin

In Britain at Haddenham Hodder and Shand 1988 the late Mesolithic material in the mound has a high ratio of by-products to implements, indicating settlement activity, but here the temporal link between settlement and tomb cannot be argued to be immediate. Reasons for discrepancies are explored and discussed.

UMR AMAP

She also shows that principles of social order are translated into settlement patterns by the practices of everyday life, relating to physical proximity, social homogeneity, race relations, form of tenure, housing styles, income levels, privacy and community *ibid*. The article aims to outline, via a comparative analysis of social and spatial organization in Central Brazil, North-West Amazonia and Guyana, a topological model common to Amazonian societies. What kind of discrepancies do user groups have related to image and evaluations? The excavators defined four activity areas: a living and weaving area, a second living unit perhaps with butchery and crop processing, an area of bone working and an area of houses and activities of unidentifiable nature *ibid*.
