### Ecology is a science that matters

Britannica does not review the converted text. It is ecology that allows humans to see these problems which then calls for the need to make informed decisions on how to adjust our resource demands to ensure that we do not burden the environment with demands that are unsustainable. Our recycling center helps make recycling possible and reduces the waste that this big urban center inevitably produces.

### Ecology: Examining the Relationships Between Living Things

Energy Conservation All organisms require energy for their growth and development. Balancing these economic needs against the global ecology is expected to be a major discussion point in both international trade and climate agreements.

### Ecology is a science that matters

We've largely heard about the commercial uses of this but already it's being used in scientific applications for local, regional and global ecological issues.

### ecology

This happens at the molecular level.
