Litter in submarine canyons off the west coast of Portugal

Kypriides N, Overbeek R, Ouzounis C. In : Biogeochemistry of sulfur isotopes, edited by M. EXTRATERRESTRIAL BAY FORMING MECHANISMS With the exception of MacCarthy 1936 , who discussed the effects of the shock wave accompanying infall of meteorites, research on the Carolina Bays has been concentrated on terrestrial characteristics.

The last universal common ancestor between ancient Earth chemistry and the onset of genetics

Suga, of Japan Agency for Marine-Earth Science and Technology. Did the origin of genetics hinge upon hydrothermal chemical conditions that gave rise to the first biochemical pathways that in turn gave rise to the first cells? Many bays have elevated sandy rims with maximum development to the southeast. Depressions created in clay-rich soils would be smaller, more shallow, and far less easy to recognize on aerial photographs.

A critical review of the case for, and against, extraterrestrial impact at the K/T boundary

TABLE 3: METEOROID CHARACTERISTICS Characteristic Descriptions Types Sporadic Shower Fireball meteorites are possible meteors only low velocity have inclinations from 0 - 30 o; with aphelions under 5 A. This causes axial incision, canyon wall slumping, and the formation of levees by spill-over deposition in the upper reach of the Kaoping Canyon.
