Bringing coal back

He not only raised concerns that coal mining would add pressure to already stretched water resources, but also about the risks of selenium, a mineral known to cause deformities in fish. The industry has been a boon, at times, leading new towns to spring from the ground up. And while Alberta Energy said last May that protections would remain in place for category 1 lands, where coal leasing, exploration and development had been prohibited, Harrison said there are outstanding questions about which policies protect them future coal development.

Integrated Resource Plans

About a third of these were small, exploratory projects that failed to produce any coal at all. The town was in crisis, again. Its proposed Grassy Mountain project would pick up where an abandoned coal mine left off decades ago on a 1,500-hectare site just north of Blairmore.

Bringing coal back

This model can also incorporate a variety of land-use knowledge, such as traditional ecological knowledge from local aboriginal communities. But eventually, they will cut their losses, along with the mining jobs. The new national content law is a product of this paradox and contains provisions that could seriously hamper the growth of the Nigerian petroleum industry.

A historical and future impact assessment of mining activities on surface biophysical characteristics change: A remote sensing

But Gregory says it has been a positive presence in Crowsnest Pass already. With the signing of Treaty 7 at Crowfoot Crossing in 1877, the Iyhe Nakoda were assigned reserve lands on the Eastern Slopes of the Rocky Mountains in their traditional hunting areas. By 1975, according to historical records maintained by the Alberta Energy Regulator, a total of 2,342 mining projects had been undertaken in the province.

You can find more information about regional planning in the. Ursus includes articles on all aspects of bear management and research worldwide. Van Tighem, with the Livingstone Landowners Group, worries Albertans are grasping for something — anything — that might deliver a quick shot of adrenaline to the economy, regardless of the consequences.

Integrated Resource Plans

Recreational users should be aware of changes to this area, including road and recreational trail closures; effective May 10, 2017 — August 30, 2017. Now, this long-standing tradeoff between environmental protection and economic opportunity is poised to change. Every region is intended to develop and enact its own comprehensive regional land-use plan, guiding future development within its territory.
