

# Clinical nephrotoxins - renal injury from drugs and chemicals

**Kluwer Academic Publishers - Nephrotoxicity definition, causes, nephrotoxicity drugs, signs & symptoms**

<b>Drug toxicity</b>
- Tenofovir, adefovir, didanosine
- Didanosine, stavudine
- Aminoglycosides
- Degraded tetracycline
- Deferasirox
- Valproic acid
- Cisplatin and carboplatin
- Ifosfamide
- Streptomycin
- Suramin
- Mercaptopurine
- Chronic alcohol consumption
- Inhaled glue
<b>Paraproteinemia</b>
- Multiple myeloma
- Light chain paraproteinemia
<b>Tubulointerstitial diseases</b>
- Acute interstitial nephritis
- Sjögren's syndrome
- Renal transplantation
<b>Heavy metal nephrotoxicity</b>
- Lead
- Cadmium
- Mercury
- Uranium

Description: -

-  
Musical instruments  
School music -- Instruction and study -- Netherlands.  
Security (Law) -- Madagascar.  
Things (Law) -- Madagascar.  
Civil law -- Madagascar.  
Briey (France) -- Church history.  
Briey (France) -- History.  
Abbaye de Saint-Pierremont -- History.  
Fourier analysis.  
Kidney Diseases -- chemically induced.  
Kidney -- drug effects.  
Kidneys -- Effect of drugs on.  
Nephrotoxicology. Clinical nephrotoxins - renal injury from drugs and chemicals  
-Clinical nephrotoxins - renal injury from drugs and chemicals  
Notes: Includes bibliographical references and index.

**Clinical Nephrotoxins Renal Injury From Drugs And Chemicals Author Marc E De Broe Published On November 2008 PDF Book**

Drugs associated with this mechanism of nephrotoxicity include calcineurin inhibitors e. These factors could well be used to reduce the health impact of nephrotoxicity. Decreased effective circulating blood volume results from sequestration of fluid into third-space compartments and is associated with sepsis, heart failure, ascites, or pancreatitis.

**Nephrotoxicity associated with exposure to chemicals, principles and methods for the assessment of (EHC 119, 1991)**

Other factors, such as electrolyte and volume changes or an alteration in the renin-angiotensin system, may affect some types of drug-induced acute renal failure Bennett et al. GFR reduction can also result in excessive drug dosing for medications excreted by the kidneys, increased drug exposure in a reduced number of functioning nephrons and ischemia preconditioned tubular cells, and more robust oxidative injury response to various medications by the kidney.

**Clinical Nephrotoxins Renal Injury From Drugs And Chemicals 1998 02 28 PDF Book**

Clear-cut therapeutic advantages of any particular aminoglycoside are not readily apparent in patients because of the serious nature of their underlying illness and concurrent therapy with multiple drugs. However, a close monitoring of renal function is strongly recommended.

**Nephrotoxicity associated with exposure to chemicals, principles and methods for the assessment of (EHC 119, 1991)**

Only sufficient information will be given to provide a general background against which nephrotoxicity can be framed.
