She Knows All About It The next time you ladies think you are the only animals in the animal kingdom to fake an orgasm, think again.

Anti

Defensive spines may be detachable, barbed or poisonous. Of all Egyptian symbols, the Scarab beetle was the most important religious symbol. Main article: The selfish herd theory was proposed by to explain why animals seek central positions in a group.

Anti

When a worker ant's leg is grasped, it suicidally expels the contents of its hypertrophied , expelling corrosive irritant compounds and adhesives onto the predator. Nocturnality is an animal behavior characterized by activity during the night and sleeping during the day.

Top 10 Strangest Animal Behaviors

Using decoy seals, the researchers varied the distance between the decoys to produce different domains of danger. Predators such as selectively hunt for abundant types of insect, ignoring less common types that were present, forming of the desired prey.

Anti

Canids often drop horned lizards after being squirted, and attempt to wipe or shake the blood out of their mouths, suggesting that the fluid has a foul taste; they choose other lizards if given the choice, suggesting a learned aversion towards horned lizards as prey. Animals may avoid becoming prey by living out of sight of predators, whether , , or by being. Main article: Animals that live in groups often give that give warning of an attack.

Top 10 Strangest Animal Behaviors

By grouping, the ostriches present the lions with greater difficulty in determining how long the ostriches' heads stay down. Escape paths are often erratic, making it difficult for the predator to predict which way the prey will go next: for example, birds such as , and evade fast raptors such as with zigzagging or jinking flight. This is especially dangerous for aquatic birds because their water repellent feathers protect them from when diving for food.
