Intermolecular bonds

Along the x-axis is the distance between the two atoms. Molecular structure of water in the crystalline state.

Intermolecular bonds

Similarly, the introduction of a double bond entails the loss of two hydrogens, and a triple bond the loss of four hydrogens.

Understanding Chemistry

.

Coordination compound

. Structural Formulas for C₄H₁₀O Isomers Kekulé Formula Condensed Formula Shorthand Formula Simplification of structural formulas may be achieved without any loss of the information they convey. Wood, which contains polycellulose and other fibers, is strong, lightweight and flexible.

Molecular Interactions (Noncovalent Interactions)

Cation- π interactions are important in protein structure.

7.2 Covalent Bonding

It possesses trigonal bipyramidal geometry. Thus, the sigma bond is said to be stronger bond in comparison to a π -bond.

Coordination compound

The greater the bonding, the more important and stable the contributing structure.
