Farm Health Online

For suckler calves born and reared indoors the incidence of pneumonia can be considerable. They need to be kept warm. So when dealing with calf pneumonia we must identify and address all these risk factors.

Respiratory problems in Calves

Decreased appetite puts a fresh cow into negative energy balance.

Preventing pneumonia in calves

Crystalyx Easy Breather is a completely natural product, specifically formulated as an aid to maintaining a healthy respiratory system. An increase in outbreaks of *Mycoplasma bovis* means farmers should be especially vigilant for symptoms, says Mr Potter, as the bacteria can be especially difficult to treat due to a different sensitivity to antibiotics. The pneumonia has a bronchopneumonic pattern.

Chronic Pneumonia in Feeder Calves? Thank *Mycoplasma Bovis*

The condition is farm related, with some farms suffering serious losses due to calf pneumonia, while on others the disease is either very mild or non-existent. Calves can get viral infections on their own, or worse, in combination with bacteria. In my opinion, pneumonia continues to be an issue because too often we don't deal with all the contributing factors.
