NIBIB is supporting research to create an inexpensive adapter for the conventional SPECT imagers that most hospitals already have. The adapter would allow standard clinical SPECT cameras to provide the same high resolution that currently only dedicated SPECT brain imaging systems can produce. The cameras are mounted on a rotating gantry that allows the detectors to be moved in a tight circle around a patient who is lying motionless on a pallet.

Nuclear Medicine

Single Photon Emission Computed Tomography or SPECT and Positron Emission Tomography or PET scans are the two most common imaging modalities in nuclear medicine. He is Board Certified in Radiology, Nuclear Radiology and Nuclear Medicine. This edition of Clinical Nuclear Medicine has been extensively revised to take account of recent developments.

Any accumulation of radioactivity in the intestines informs doctors of where the problem lies. The total radiation dose conferred to patients by the majority of radiopharmaceuticals used in diagnostic nuclear medicine studies is no more than what is conferred during routine chest x-rays or CT exams.
