**A new species of Metopocetus
(Cetacea, Mysticeti, Cetotheriidae)
from the Late Miocene of the
Netherlands [PeerJ]**

Specifically, questions remain regarding the monophyly of Balaenopteridae relative to Eschrichtius robustus, or living gray whales and the monophyly of the clade Balaenoptera with regard to the living genus Megaptera. In posterior view, the main ridge of the bulla is oriented medially, so that the inner posterior prominence faces dorsally, and the outer posterior prominence ventrally and.

Figure 3 from Albicetus oxymycterus, a New Generic Name and Redescription of a Basal Physeteroid (Mammalia, Cetacea) from the Miocene of California, and the Evolution of Body Size in Sperm Whales

In life, this ridge likely demarcated the lateral margin for the surface of origin for the temporalis muscle. The squamosal is robust medially at the position of the mastoid crest where it abuts the supraoccipital and exoccipital, and pinches and slants anteroposteriorly as it extends anterolaterally becoming the zygomatic process.

The Celite quarry mentioned for the type of Norrisania is equivalent to the Johns-Manville quarry see, but separate from the nearby Lakes Carbon Corporation quarry which is the type locality of the fossil odobenid Imagotaria downsi and very likely separate from Celite Quarry No. Comments: Fossil material from the Funakawa Formation upper Miocene of Akita, Japan and isolated tympanic material from the Tatsunokuchi and Na-arai formations Lower Pliocene of northeastern Honshu, Japan have been tentatively assigned to this taxon.

Figure 3 from *Albicetus oxymycterus*, a New Generic Name and Redescription of a Basal Physeteroid (Mammalia, Cetacea) from the Miocene of California, and the Evolution of Body Size in Sperm Whales

A smooth involucrum is typical of juvenile individuals, and may hence indicate that NMR9991-07729 is more likely to be an old juvenile than an adult. The main and involucral ridges converge anteriorly, while being more clearly separated posteriorly by a relatively shallow median furrow and interprominential notch.
