### Impact of land reclamation and agricultural water regime on the distribution and conservation status of the endangered *Dryophytes suweonensis* [PeerJ]

The description of the potential range for *D. To* promote international research exchange and cooperation for the protection of intertidal wetlands and migratory birds in the Yellow Sea; and 2. The Suweon Treefrog *Dryophytes suweonensis* is an endangered species endemic to the Republic of Korea.

### Roost selection of the endangered Spotted Greenshank (*Tringa guttifer*) in critical habitat in the Inner Gulf of Thailand

The total area of the two components is 188,643 ha plus a buffer zone of 80,056 ha.

### Roost selection of the endangered Spotted Greenshank (*Tringa guttifer*) in critical habitat in the Inner Gulf of Thailand

Newly constructing, renovating, extending, altering or removing a wharf, a breakwater, a bridge, a floodgate, new energy and renewable energy facilities referring to new energy and renewable energy facilities referred to in subparagraph 3 of; hereafter the same shall apply in this Chapter , a building referring to a building provided for in which is installed without developing land on the pubic waters; hereafter the same shall apply in this Chapter or other artificial structure on any public waters; 4 Where any person who has obtained an occupancy or use permit intends to change the matters, etc. This standard requires utility companies to generate a certain portion of energy from renewable resources: about 2 percent 1,474 MW by 2012 and 8 percent 6,648 MW by 2020. The analysis of land cover maps from 2001 to 2014 showed trends of diminishing intertidal zones resulting from various development projects, which is consistent with previous findings Kim and Gu.

### Assessment of seismic vulnerability using the horizontal

Most of the flood water matching with the occurrence of *Dryophytes suweonensis* originated from the Geum River 53.

### Impact of land reclamation and agricultural water regime on the distribution and conservation status of the endangered *Dryophytes*

**suweonensis [PeerJ]**

Incheon Bay TPP would be built by a partnership between the national Ministry of Land, Transport and Maritime Affairs MLTM and Korea Hydro and Nuclear Power. Depending on the tides, an average of 9 ponds range 1—45 were visited each survey day over the course of 69 survey days.

### **South Korea's Plans for Tidal Power: When a "Green" Solution Creates More Problems**

On the other hand, birds probably prefer to roost in natural wetlands than in artificial habitats when available, but use is still limited by accessibility and capacity of natural structures. Characteristics of population dynamics and habitat use of shorebirds in rice fields during spring migration. The average sphericity was 1.

### **Assessment of seismic vulnerability using the horizontal**

Avian Res 11, 36 2020. Consultation or approval under Article 38 1 of the previous 2.
