### Charles Darwin

Some few naturalists maintain that animals never present varieties; but then these same naturalists rank the slightest difference as of specific value; and when the same identical form is met with in two distant countries, or in two geological formations, they believe that two distinct species are hidden under the same dress.

### The Origin of Species by Means of Natural Selection

Darwin was not the first to have these kinds of thoughts. No one supposes that our choicest productions have been produced by a single variation from the aboriginal stock.

### Natural selection

Artificial selection is where natural selection is not, though to describe it. It includes a glossary compiled by W.

### The Origin of Species by Means of Natural Selection

Darwin borrowed 's argument in that the record is extremely imperfect as is a very rare occurrence, spread over vast periods of time; since few areas had been geologically explored, there could only be fragmentary knowledge of, and fossil collections were very poor.

### On the Origin of Species

Genetic Algorithms in Search, Optimization and Machine Learning. The results appeared in The Effects of Cross and Self Fertilization in the Vegetable Kingdom 1876.

### The Origin of Species by Means of Natural Selection

No one was entirely convinced yet, but some progress was being made. Darwin acknowledged Blyth's ideas in the first chapter on variation of On the Origin of Species.

### **SparkNotes: Charles Darwin: The Origin of Species**

He took time off in April for more hydropathy, which he was beginning to think worked only because it relaxed him and forced his mind of work.

### **SparkNotes: The Origin of Species: Chapter IV**

Birds and bananas aren't distant cousins! I am fully convinced that species are not immutable; but that those belonging to what are called the same genera are lineal descendants of some other and generally extinct species, in the same manner as the acknowledged varieties of any one species are the descendants of that species. I much regret that want of space prevents my having the satisfaction of acknowledging the generous assistance which I have received from very many naturalists, some of them personally unknown to me.
