## Heart Failure in End

Recent studies have shown that effective antihypertensive therapy, especially with angiotensin-converting enzyme inhibitors, restriction of dietary protein, and excellent glycemic control in patients with diabetes, can retard the progression of chronic renal disease. Management with sodium-glucose transporter 2 SGLT-2 inhibitors may reduce the disease burden in those with type II diabetes mellitus.

## End

A prolonged urinary tract obstruction or blockage. Results: Despite a high prevalence of associated comorbidities, most of the patients are autonomous, living at home.

## Stage 5 Kidney Disease (ESRD)
