## Pygmy Nightjar (*Nyctipolus hirundinaceus*)

Presumed males exhibit whitish elongated spots on P2—5 numbered ascendantly and relatively plain, mainly greyish, indistinctly patterned lower scapulars forming a pale panel, whilst females have the whitish in the wing restricted to exceedingly small spots on P3—4 and buffish lower scapulars boldly vermiculated with dark brown.

## Nightjars, Potoos, Frogmouths, Oilbird, and Owlet

. Access codes may or may not work.

## Cleere Nigel

Furthermore, as it appears to be partly tolerant to habitat degradation, its treatment as Vulnerable 2,8 may perhaps be downgraded to Near-threatened. Being strictly nocturnal and cryptically patterned in shades of brown, it is often necessary to rely on size, shape, habitat and voice to safely identify a species.

## Puerto Rican Nightjar (*Antrostomus noctitherus*)

As noted for Archbold's Nightjar 4 and pers.
