The rust resistance is moderately high, while the thrip resistance is moderate to low. How did you first get involved with daylilies? I like sculpting in all its forms. I continued to grow daylilies throughout my childhood and teen years and was completely obsessed with them, but really had no awareness of the wider daylily world, AHS or daylily breeders beyond the Wild family and A.

Peak Blueberry Season begins: Organic PYO The Blueberries typically produce an enormous amount of berries, but sometimes because of heavy picking the crop can be in short supply while the next batch ripens July 18-July 19 CANCELLED This weekend is a lot of fun! My experience suggests that rust resistance is very rare amongst most tetraploid lines, likely due to the original, narrow gene pool the tetraploids were created from being predominantly susceptible to rust but who could have known that then? I knew in time that Substantial Evidence or some of its descendants would be converted to tetraploidy and could then be added to my tetraploid program, but in the meantime, I could work with Substantial Evidence at the diploid level and learn about its genetics. The first of these plants came to the New York Botanical Garden in a collection of wild plants obtained in the interior of China. They are considered by the Chinese as having both edible and medicinal properties.
